## IN THE CLAIMS

The currently pending claims are provided below in clean format, for the Examiner's convenience.

1. (Unchanged) A method of sending data from a communication station, the method comprising:

receiving semi-structured data from a personal digital assistant (PDA) in a format native to the PDA;

parsing the semi-structured data to identify a type of the semi-structured data; if the semi-structured data is destination data, sending the data to a destination indicated by the semi-structured data.

- 2. (Unchanged) The method of claim 1, wherein the PDA beams the semistructured data, in a standard PDA format, to the communication station.
- 3. (Unchanged) The method of claim 1, wherein the PDA is physically coupled to the communication station to send the semi-structured data.
  - 4. (Unchanged) The method of claim 1, further comprising: if the destination data indicates a plurality of destinations; prompting a user to select one of the plurality of destinations.
- 5. (Unchanged) The method of claim 1, wherein the destination defines how the data is sent.

- 6. (Unchanged) The method of claim 5, wherein if the destination is an e-mail address, the data is e-mailed, and if the destination is a fax number, the data is faxed.
- 7. (Unchanged) The method of claim 1, further comprising:

  if the semi-structured data is source-location data, fetching information from a source indicated by the source-location data; and prompting a user to select the destination for the information.
- 8. (Unchanged) The method of claim 7, wherein the destination may be one or more of the following: a copy feature of the communication device, an e-mail address, and a fax number.
  - 9. (Unchanged) The method of claim 7, wherein the fetching comprises: connecting to a network; connecting to the source; and downloading the information from the source.
- 10. (Unchanged) The method of claim 1, further comprising: if the semi-structured data is a search request, fetching information from a search location; and

prompting the user to select the destination for the data based on the information.

- 11. (Unchanged) The method of claim 10, wherein a search request is an incomplete data set.
  - 12. (Unchanged) The method of claim 10, wherein the fetching comprises: connecting to a network; connecting to the source; and downloading the information from the source.
- 13. (Unchanged) The method of claim 10, wherein the search location is one or more of the following: an internal directory of users, an electronic white pages.
  - 14. (Unchanged) The method of claim 10, further comprising: if the data is not recognized, prompting the user to identify a data type.
- 15. (Unchanged) An apparatus for sending data from a communication station, the apparatus comprising:

a communication interface to receive semi-structured data from a personal digital assistant (PDA) in a format native to the PDA;

a parser to parse the semi-structured data and to identify a type of the semistructured data;

a data structuring logic for generating a structured data from the semi-structured data; and

a sending logic for receiving the structured data and sending appropriate data to a destination indicated by the structured data.

- 16. (Unchanged) The apparatus of claim 15, wherein the communication interface receives the data over an infrared beam, in a standard PDA format.
- 17. (Unchanged) The apparatus of claim 15, wherein the communication interface further comprises a socket for receiving the PDA, such that the PDA is physically coupled to the communication station to send the semi-structured data.
- 18. (Unchanged) The apparatus of claim 15, further comprising: the data structure logic further for determining if the destination data indicates a plurality of destinations; and

a user interface for prompting a user to select one of the plurality of destinations.

- 19. (Unchanged) The apparatus of claim 15, wherein the destination defines how the data is sent.
- 20. (Unchanged) The apparatus of claim 19, wherein if the destination is an e-mail address, the data is e-mailed, and if the destination is a fax number, the data is faxed.
  - 21. (Unchanged) The apparatus of claim 15, further comprising:

a retrieving logic for receiving the semi-structured data if the semi-structured data is source-location data, the retrieving logic further for fetching information from a source indicated by the source-location data; and

a user interface for prompting a user to select the destination for the information.

- 22. (Unchanged) The apparatus of claim 21, wherein the destination may be one or more of the following: a copy feature of the communication device, an e-mail address, and a fax number.
- 23. (Unchanged) The apparatus of claim 21, wherein the retrieving logic is further for connecting to the source through a network and downloading the information from the source.
  - 24. (Unchanged) The apparatus of claim 15, further comprising:the retrieving logic for fetching information from a search location if the semi-

structured data is a search request; and

a user interface for prompting the user to select the destination for the data based on the information.

- 25. (Unchanged) The apparatus of claim 24, wherein a search request is an incomplete data set.
- 26. (Unchanged) The apparatus of claim 24, wherein the retrieving logic is further for connecting to the search location through a network and downloading the information from the search location.
- 27. (Unchanged) The apparatus of claim 24, wherein the search location is one or more of the following: an internal directory of users, an electronic white pages.
  - 28. (Unchanged) The apparatus of claim 24, further comprising:

the user interface for prompting the user to identify a data type if the data is not recognized.

- 29. (Unchanged) The apparatus of claim 15, further comprising: a PDA interface for indicating to the PDA what actions were performed.
- 30. (Unchanged) A method of sending data from a communication station, the method comprising:

receiving semi-structured data from a personal digital assistant (PDA) in a format native to the PDA;

parsing the semi-structured data to identify a type of the semi-structured data; acting on data in the manner indicated by the semi-structured data and a user; and

returning a confirmation receipt to the PDA in a format native to the PDA, the confirmation receipt including a unique identification (ID).

- 31. (Unchanged) The method of claim 30, wherein the unique ID includes document/data sent, destination, and method of sending.
- 32. (Unchanged) The method of claim 30, further comprising: if the semi-structured data includes the unique ID, retrieving data associated with the unique ID, and permitting the user to reuse the data.
- 33. (Unchanged) The method of claim 32, wherein reusing the data comprises one or more of the following: re-printing a job, reusing addresses, reusing document/data, and pulling up the data on a different communications appliance.

- 34. (Unchanged) A system comprising:
- a personal digital assistant (PDA);
- a communications appliance coupled to a network;
- a memory for storing a unique job identification (job ID) for each job handled by the communications appliance.

the communications appliance comprising:

a communication interface to receive semi-structured data from the PDA;

a parser to parse the semi-structured data and to identify a type of the semi-structured data;

a sending logic for handing data based on the semi-structured data received from the PDA; and

the communication interface for returning the job ID to the PDA.

- 35. (Unchanged) The system of claim 34, wherein the job ID may include one or more of the following: identification of the item, destination of the item.
- 36. (Unchanged) The system of claim 35, wherein the destination of the item comprises one or more of the following: printing, faxing to an address, e-mailing to an address, and copying.
  - 37. (Unchanged) The system of claim 34, further comprising:

a user identification logic for identifying an owner of the PDA from whom the data is received.

- 38. (Unchanged) The system of claim 37, wherein the job ID further includes the identity of the owner of the PDA.
- 39. (Unchanged) The system of claim 37, wherein a job history may be displayed to the user, when the user is identified.
- 40. (Unchanged) The system of claim 37, wherein a stored list of addresses used by the user in the past may be displayed to the user when the user is identified.
